DETAILED ACTION

1. Claims 1-16 are pending. Claims 1, 5, 9, 12-16 are rejected under Double Patenting.
Claims 2-4, 6-8, 10-11, are objected.

Continued Examination Under 37 CFR 1.114

2. A request for continued examination under 37 CFR 1.114 was filed in this application after appeal to the Board of Patent Appeals and Interferences, but prior to a decision on the appeal. Since this application is eligible for continued examination under 37 CFR 1.114 and the fee set forth in 37 CFR 1.17(e) has been timely paid, the appeal has been withdrawn pursuant to 37 CFR 1.114 and prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 30 April 2007 has been entered.

Claim Objections

3. Claims 2-4, 6-8, 10-11, are objected to as being dependent upon a rejected base claim.

Double Patenting

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

Art Unit: 2629

5. A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

6. Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

7. Claims 1, 5, 9, 12-16 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 1^{5, 18, 16} of Willis et al. (U.S. Patent No. 7,119,774 B2).

Although the conflicting claims are not identical, they are not patentably distinct from each other because:

<i>Current Application, Claim 1</i> (US Publication No: 2003/0156091 A1)	<i>Reference, Claims 1</i> (US Patent No: 7,119,774 B2)
A circuit for reducing adjacent pixel interdependence in a liquid crystal display, comprising:	A method for reducing sparkle artifacts of a liquid crystal imager, comprising the steps of:
a decomposer for dividing an input video signal into a plurality of signals having at least a high brightness signal and a low brightness signal;	dividing a video signal for a picture into a higher brightness level signal
a split low pass filter arrangement for independently low pass filtering rising transients and lengthening a fall time of falling transients in said low brightness signal to reduce adjacent pixel interdependence; and,	and a lower brightness level signal low pass filtering said lower brightness level signal;
a delay matching circuit for the high brightness signal;	delaying said higher brightness level signal to match a processing delay incurred by said low pass filtering; and,
and means for combining the delayed high brightness signal with the filtered low brightness signal to provide an output with reduced sparkle artifacts	combining said low pass filtered lower brightness level signal, and said delay matched higher brightness level signal;

8. As can be seen from the table above, reference 7,119,774 discloses all the limitations of claim 1 of the instant application. Similar analysis to the one above can be made for the following claims:

<i>Current Application</i> (US Publication No: 2003/0156091 A1)	<i>Reference</i> (US Patent No: 7,119,774 B2)
Claim 5	Claim 1
Claim 9	Claim 1
Claim 12	Claim 1
Claim 13	Claim 1
Claim 14	Claim 1
Claim 15	Claim 18
Claim 16	Claim 16
